•

GPS Electronic Monitoring

Guardian Ankle Monitoring Service provides GPS and alcohol detection monitoring programs which are reliable, secure, and affordable. These successful and proven programs keep offenders connected to their families and their jobs.

If an offender needs a GPS device for house arrest or pre-trial release, Guardian provides the Tel-mate Guardian and Stop LLC service, which monitors the client's location 24/7 without modems or phone lines. Report time increments can be from 3 minutes to 30 minutes.

Guardian Ankle Monitoring was formed to satisfy a need for an interim tool between a “hand-slap” and incarceration. A need was identified in both juvenile and adult detention centers for a tool that allowed offenders to be monitored without filling up beds needed for more serious offenders. Additionally, it relieved the budgetary concerns for cities and counties by saving the daily costs of incarceration including
